FIG. 7: The impact on $S(0)$ and $Br(0)$ of analyzing subsets of our full data set. The blue-dashed "w/o S & L" curve is the result if Seattle and Luna data are both excluded, while the orange-dashed "+ L" and green-dot-dashed "+ S" curves show the result when that analysis is supplemented with the Luna and Seattle data respectively. The solid curve "+S & L" curve is our final NLO result, including all data sets described above.
